

Field Installable Connector Preparation Kit

Optronics field-installable connectors make fibre terminations fast, easy and reliable. These fibre optic connectors offer terminations in less than five seconds without any hassles and require no epoxy, polishing or crimping.

To accompany these connectors Optronics can also supply all the items needed for their preparation in a handy tool kit. The kit comes complete with all the tools to strip, clean and cleave the fibre. An enhanced preparation kit also contains a visual fault locator for continuity checking and a handheld inspection scope to ensure the connector is free from potentially harmful dirt and contamination.

Kit Contents

ITEM	QUANTITY
