NP 500E

Fiber*Express®* Ultra HD System

Elegantly simple yet uncompromisingly flexible. Ultra high-density rack-mount fiber connectivity system, crafted for effortless installation and maintenance.

The Fiber*Express* Ultra HD System is the Next Evolution in Convenient, Easy-to-use, High-density Fiber Connectivity

- 1, 2, and 4U housings
- Ultra high cabling density: up to 72 LC Duplex or 72 MPO adapters per rack unit
- Clean, convenient cable management
- Efficient one-person installation
- Adaptable for present and future needs
- Easy access for fast, efficient MACs

FiberExpress Ultra HD

The Belden Fiber*Express* Ultra HD provides designers complete flexibility to architect a fiber connectivity solution to adapt to the varying port count needs in Data Centers and LANs:

- Top-of-rack configurations with low-tomedium port counts
- End-of-row configurations with mediumto-high port counts

Common intuitive components and modular design means that Installers and End-Users do not have to learn different systems to support different needs. In addition, fewer components must be stocked for different configurations. It becomes easier to manage moves, additions, and changes (MACs).

Maximize Revenue With the Highest Density Connectivity

The trend toward high-density computing and storage requires connectivity that scales to facilitate the evolution of both Data Center and LAN applications.

Fiber*Express* Ultra HD allows the highest density connectivity available—doubling the density over comparable units. With Fiber*Express* Ultra HD, each rack unit can accommodate up to:

- 72 LC Duplex connections (144 fibers) or
- 72 MPO connectors

This 50% reduction in required rack unit space means more active equipment per rack—and increased revenue per square foot for Data Center operators. Alternatively it reduces the space required for LAN equipment, reducing OPEX for end-users.

A new product to serve your needs. Be certain.

Compact Size Through Modular Design

Current trends have reduced the need for splices and splice trays, Fiber*Express* Ultra HD supports a field-upgradable, 144 splice tray housing kit easily added to any or all of the system's 1U module trays.

Without the tray, the standard Fiber*Express* Ultra HD housing significantly reduces the depth of the system by over 25 cm (>10") versus competitive products. The additional space allows easier, clean cable management. It also provides additional space for oppositerail-mounted equipment, to effectively increase the total rack unit space available.

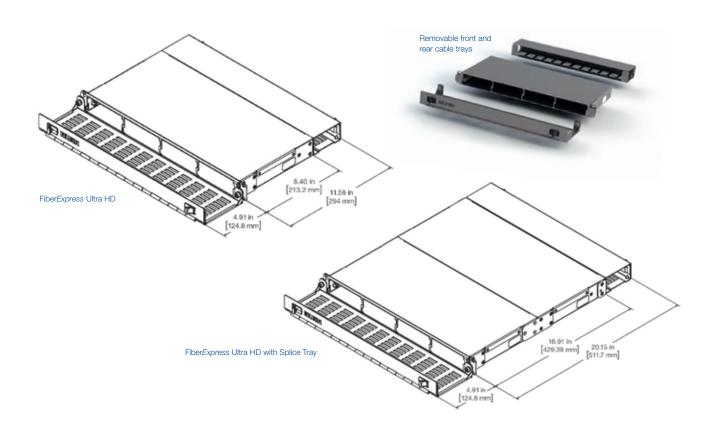

Removable front and rear cable trays add to system flexibility. The reduced physical footprint of the system enables additional mounting options – including shallow racks and cabinets, vertical mounting configurations and even floor and ceiling boxes.

Reduce Installation Labor With Lightweight Systems

Crafted out of highest quality materials using innovative design and assembly techniques, even the largest 4U FX Ultra HD weighs only 9.75 kg (21.5 lb). Toolless removable module trays mean that a single installer can safely maneuver the lightweight panel housing and secure the system into the rack.

A single installer can install the system

Improved accessibility and visibility leads to fast, clean, error-free installations.

Speed up the Install Process and Eliminate Errors With the Installer-friendly Sliding and Tilting Module Tray

A standard sliding module tray brings the work platform out of the rack and at a 23 degree tilt down toward the installer to improve accessibility during installation. A quickly installed lid and front patch cord tray provides unprecedented visibility to the work at hand.

Improved accessibility and visibility leads to fast, clean, error-free installation.

Side-in trays tilt outward to improve accessibility

Eliminate Accidental Disconnects During MACs

With the high value of data on fiber-optic networks, accidental interruption while performing MACs can have significant financial consequences for network operators.

A sleek unencumbered front faceplate provides plenty of space for shelf identification labeling. Clear always-visible port labeling ensures the right fiber is found every time. The sliding module tray with access and visibility to individual cassettes and frames further reduces maintenance effort.

Protect Your Investment While Accommodating Legacy Connectivity Today

Meet the challenges of balancing future needs against the need to maintain a legacy infrastructure.

Fiber*Express* Ultra HD provides a cost-effective upgrade path from current 1G and 10G to 40G and 100G networks.

Its flexible modular approach supports legacy applications using ST, SC, and LC. The system can be upgraded as needed with a simple cassette or adapter frame change. With no need to replace the entire system, it provides a costeffective entry point today with scalability to meet the needs of tomorrow.

AX104619, Fiber*Express* Ultra HD Frame, LC Duplex, 18 ports, 36 fibers

AX104620, Fiber*Express* Ultra HD Frame, 18 MPO adapters
