

Socket outlet boxes

Installation socket outlets with installation couplers are used in recessed ceiling applications and mounted to a cable tray or luminaire support tray, for example. Designed to provide flexibility with regard to both couplers and connections, these products are easy to customise to meet your specific needs. The socket can be fixed to the installation plate with screws (max. ø 6 mm), either through the two holes in the middle of the box or the four holes in its corners. The product has grooves for cable ties and four holes for snap-on pins. Snap-on pins are sold separately.

Socket outlet box, with two separate single-phase outlets, with earth, two double socket outlets

The NAP300 socket outlet box is equipped with two separate single-phase installation coupler inlets for regular (white couplers) and secure (black couplers) power supply, branched into two double socket outlets. This box has continuous supply for the outlets.

Product code	GTIN	Description	Weight	Package
NAP300	6418677701078	White and black single-phase couplers	425 g	10

Socket outlet box, single-phase, with earth, two double sockets

The NAP301 socket outlet box has a single-phase supply which is branched into two double sockets. This box has continuous supply for output.

Product code	GTIN	Description	Weight	Package
